ANUPHAP THAIWONG

FULL STACK DEVELOPER

Khonkaen 40000 Thailand | Phone: 0980969178 | Email: anuphap.th02@gmail.com

GITHUB | LINKEDIN | PORTFOLIO

SUMMARY

Started at Waygrown Solution in June 2025 as a Frontend Developer, building the UI of a large government research and budget system: multi-step forms, approval workflows, finance pages and real-time dashboards. Moved into full-stack work in 2026, taking ownership of backend modules and document features such as certificate PDF generation and multi-signer digital signing. Alongside this, delivered contracted web systems as the sole developer, from the data model and access control to deployment. Tests work with SonarQube and Playwright, and holds a B.Sc. in Computer Science from Khon Kaen University. Designed and continuously tunes a multi-agent AI development workflow on Claude Code with review, test and security agents and verification gates. Keeps learning new tools as needed.

CORE COMPETENCIES

- **Frontend:** Next.js, React, TypeScript, Tailwind CSS
- **Backend:** NestJS, Node.js
- **Data:** PostgreSQL, MySQL, Supabase, Firebase
- **DevOps:** Docker, Kubernetes, Git
- **Testing:** SonarQube, Playwright
- Component-based architecture, UX/UI fundamentals

EDUCATION

Bachelor of Science in Computer Science **2021 - 2025**

Khonkaen University / GPAX: 3.12

Awards | The 11th NCTIM 2025 **March 2025**

- Excellent Presentation Award (only 7 awards given across 7 topics)

WORK EXPERIENCE

Waygrown Solution

Full Stack Developer *Jan 2026 - Present*
Frontend Developer *June 2025 - Dec 2025*

e-Seed Analysis Certificate

Government service where applicants request seed-quality analysis, lab staff test samples, and officers review and sign certificates.

- Led the certificate module: automatic drafts, applicant and officer review, and multi-signer digital signing.
- Built certificate PDFs (official and ISTA formats) with QR verification and PDF/A-3 archiving, plus sample labels and stickers.

DOA-RIBS

Research information and budget system where researchers submit projects for multi-step approval and staff manage budgets.

- Main frontend developer for project submission and change requests, and finance pages with Excel/PDF export.
- Built real-time WebSocket dashboards and the scheduled job service (NestJS) that pre-aggregates report data.

Contract Developer

E-learning SMAC

Learning management system with an AI tutor where instructors build courses and tests, and students learn by year and group.

- Sole developer (Next.js, Supabase, Cloudflare R2), with Row Level Security access by role, year and class group.
- Built the Google Gemini AI tutor chat and a tutor mode with question banks, timed attempts and server-side scoring.

SMNC Dashboard

Research and innovation repository where researchers record work and submit ethics proposals and IP registrations for expert review.

- Sole developer (Next.js, TypeScript, Supabase); built the ethics submission workflow with reviewer and expert assignment.
- Built role-based access with Row Level Security and temporary expert accounts with automatic expiry.

Senior Project | Khon Kaen University

UX Community Share: Next.js and Firebase app for UX students to share work and peer feedback, with Google Cloud Vision auto-tagging.

OTHER SKILLS

AI-assisted development: JOYURI, own Claude Code multi-agent workflow (skills, hooks, MCP, verification gates)
Languages: Thai (Native) / English (Independent)
